

INSTALLATION INSTRUCTION

LAMP POST

CAUTION:

Please be advised that we always recommend a qualified electrician is used for lamp posts installations. They may make modifications due to ground type, exposure and environment. Also, a qualified electrician should inspect and test equipment before final connection. A test certificate should be supplied by your electrician to prove that completed installations comply with current wiring regulations .

STEPS

1. Once you have found a suitable ground area for your lamp post, place the aluminum base at the location. you can then mark out the fixing holes.
2. Ensure the concrete base has been fitted with a suitable means of threading your electrical cable.
3. After you have everything prepared, you can drill your holes, ready to fix the lamp post base into position using the expanding rawl bolts.
4. With the base now in position, you can fit the pole using the provided allen screw and allen wrench.
